LAME COWS:
✓ Produce less milk
✓ Take more time to breed back
✓ Move slowly to the parlor
✓ Are in pain!

Look for early signs of lameness:
#1: Back arch: Lame cows have an arched back when they stand and walk
#2: Short Step: Cows with a foot problem don’t move their back foot as far forward as normal cows, and they may move one foot faster than the other

IF YOU SEE A LAME COW:

Back arch + Short step = LAME COW
Limping = LAME COW
